LANGUAGE AND COMPUTER SKILLS

Languages: Bilingual, English - Spanish. Advanced Italian, spoken and written

Computer Skills: Trados, Transit, Wordfast, Office

Selected list of recently translated patents and other technical documents

- Method for optimising the design of access openings on an aircraft
- Air to air refuelling system with an autonomous electrical system
- Pressure compensating device in aircraft
- System for detecting the status of a tube for fuel transfer (hose and drogue in air refueling)
- Tanker aircraft with a refueling device for refueling with a hose and an electric power generator basket
- Reinforcing structure integrated in the internal structure of an aircraft of composite material
- Method for manufacturing pieces of composite material having varied thicknesses
- Instruction manuals for engines and train systems manufactured in Spain for export and use in an Eastern European country
- System for detecting the status of a tube for fuel transfer
- Installation and maintenance manuals of a fire extinguishing system for trains
- Axle box for railway wheelsets and bogies
- Method for binocular measurement and control of the aberrations of the eyes, simultaneous presentation of visual stimuli and an ophthalmic instrument for implementing said method
- Module with high photovoltaic concentration
- Procedures and devices for the formation of retraction joints in works of concrete
- Method for binocular measurement and control of the aberrations of the eyes
- Coupling accessory for wire mesh cable trays and procedure for assembling sections of said tray
- Content delivery method (multimedia): broadcasting digital multimedia content on a distributed network
- Film for lamination of graphic supports and procedure for manufacturing
- Optical device for correcting the refraction in the peripheral retina in an asymmetric manner for controlling the progression of myopia
- Procedures and devices for the formation of retraction joints in works of concrete
- Method for providing multimedia services
- Module with a high Photovoltaic Concentration
- Instrument for rapid measurement of the optical properties of the eye in the entire field of vision
- Reinforcing structure integrated in the internal structure of an aircraft of composite material
- Device and method for creating links
- Procedure for recognizing objects (*automated warehouses*)
- Expert's Opinion on a patent application for the administration of an emergency contraceptive medicine
- Polymer composite for the stabilisation of soil, dust control and embankment erosion
- Device for the application of cold in a controlled manner
- Tool for compression after impact tests
